- Description updated

#### #2 - 2017-08-29 16:30 - Marc Dequènes

Good catch for rbot.

/data/Vingilot\_backup is not guaranteed to have only clean data, so not eligible. I need to triage and remove.

/data/elwing\_sys is probably useless now. I need to triage and remove.

/data/share/Data-Important is useful and eligible, but is taking quite some space and counting. I'd be glad is it was saved too. Currently it is mirrored on Touchirou but it is ignored too. Would 108GB and more in the future be acceptable?

Agreed for exclude\_regex.

#### #3 - 2017-08-30 00:23 - Pierre-Louis Bonicoli

s/backup\_exclude/backup\_excludes/ (same for backup\_exclude\_regex)

is that ok with you ?

Currently it is mirrored on Touchirou but it is ignored too. Would 108GB and more in the future be acceptable?

Would it be possible to backup it once ? I mean: we should try to backup it but mirror on Touchirou should not be included on the backups of

Toushirou.

**#4 - 2017-08-30 05:03 - Marc Dequènes**

Yes the renaming is fine.

I would rather backup from Toushirou to avoid having my own connection being even slower ([#550](#)); also I experienced end-of-month special slowdowns probably due to quota, so that's not a very nice situation.

I checked my Unison config and .nobackup is ignored, which means it is easy to allow backup of only one instance. I re-enabled the one on Toushirou.
